PM-CARE® INSERT-KIT

IUD INSERTION KIT

The PM-CARE® INSERT-KIT IUD insertion kit is used to insert an intrauterine device in the intrauterine cavity. It is composed of a Cheron forceps, a Pozzi forceps, a pair of string scissors and a hystrometer.

KIT COMPONENTS

PM-CARE® CHERON

ANGLED CHERON FORCEPS

Used during gynecological examinations or during IUD insertion, the **PM-CARE® CHERON** Cheron forceps allow the secure grasping of a sterile dressing, swab, or gauze pad to apply antiseptic and/or clean the cervix or the operative field.

PM-CARE® POZZI

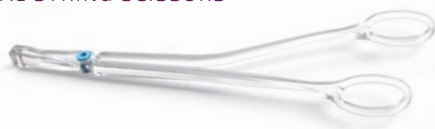

STRAIGHT POZZI FORCEPS

The **PM-CARE® POZZI** straight Pozzi forceps grasps the cervix, performing "traction-fixation" on the cervix to enable the flexion angle of the uterus to be adjusted to 180°. This correction of the flexion angle is necessary in order to insert instruments and fit the intrauterine device without risking uterine perforation.

PM-CARE® EASYCUT

DISTAL STRING SCISSORS

Lateral or distal **PM-CARE® EASYCUT** string scissors are used to cut the strings of the intrauterine device.

PM-CARE® HYSTEROMETRE

HYSTEROMETER

The **PM-CARE® HYSTEROMETRE** allows the depth of the uterus to be assessed during gynaecological examinations, particularly for the insertion or removal of a contraceptive device.

- Diameter (Fr): 14
- Diameter (mm): 4.6
- Color: Green
